

## BUILDING COMMISSIONING CO-OP STUDENT

### What You'll Be Doing

As a Building Commissioning Co-op Student, you'll be part of a friendly and collaborative team of Engineers and Technologists. We support each other, take on new challenges, and grow together. Your role will include:

- Working on commercial building commissioning projects (mechanical, controls, electrical) and energy management initiatives.
- Helping with design tasks like reviewing drawings, writing specs, assisting with system start-ups and testing, and preparing systems manual documents.
- Teaming up with coworkers and external partners to make sure projects run smoothly.
- Getting involved in research and development related to commissioning.
- Helping expand our commissioning services.
- Visiting job sites and doing inspections.

### What We're Looking For

We're always learning and pushing each other to do better. If you're someone who's curious, collaborative, and ready to dive in, here's what we'd love to see:

- Working toward a diploma in a relevant field (Mechanical/Electrical Engineering Technology, Applied Science in Mechanical/Electrical/Controls)
- Familiarity with building commissioning/energy codes and standards (NECB, ASHRAE 90.1, 209, 55, 62.1, Guideline 0) as well as sustainable building programs (LEED, Green Globes and the Zero Carbon Building standard)
- You care about making buildings more energy-efficient and resilient to help fight climate change.
- Hands-on experience with mechanical or electrical systems is a bonus.
- A team player with strong communication skills—both in person and online
- Comfortable using Microsoft Office
- Physically able to work on construction sites in different conditions
- Legally allowed to work in Canada and able to pass government security checks
