

## CIVIL TECHNOLOGIST CO-OP STUDENT

### What You'll Be Doing

Are you a Architectural/Engineering Technology or Structural Engineering Technology student at RRC Polytech looking for a hands-on summer experience? Join our Structural Engineering team and get involved in real projects that focus on structural design of new and existing buildings.

- Help design and analyze new and existing structures—from site visits and drawing reviews to design and construction.
- Work on restoration projects, including inspecting and planning repairs for concrete, steel, wood, and masonry structures.
- Create construction drawings using AutoCAD or REVIT.
- Collaborate with our team and external partners to keep projects moving smoothly.
- Pitch in with other tasks as needed.

### What We're Looking For

We're always learning and pushing each other to do better. If you're someone who's curious, collaborative, and ready to dive in, here's what we'd love to see:

- You're currently studying Architectural/Engineering Technology or Structural Engineering Technology.
- You're detail-oriented, eager to learn, and good at solving problems.
- You communicate well and enjoy working with others.
- You're comfortable working both in the office and out in the field.
- Any past experience in design or construction is a bonus.
- You're physically able to visit construction sites.
- You know your way around Microsoft Office, and if you've used AutoCAD or Revit, that's a plus.
- You're eligible to work in Canada and can pass all Government security clearances.
